

Jesslyn Devina

✉ jesslynariyadev@gmail.com  Jesslyn Devina  Vancouver  My Website

 Product focused engineer passionate about user-centric design and experienced in leading cross-functional teams, building early-stage prototypes, and turning data into product growth strategy

EDUCATION

BASc in Engineering Physics, *The University of British Columbia*

09/2020 – 05/2025

TECHNICAL EXPERIENCE

Founder & Developer, *Walnut* 

10/2024 – 05/2025

- Led development of an AI-powered note-taking app from concept to MVP, iterating on the UI/UX and integrating features like live transcription and translation
- Conducted 80+ user interviews and translated qualitative findings into actionable insights and to prioritize product requirements

Data Engineer, *Insurance Corporation of British Columbia*

05/2024 – 08/2024

- Built SQL + Python data pipelines processing 100,000+ crash records and developed diagnostic data visualizations, enabling executives to weigh risk tradeoffs for safety initiatives
- Analyzed 10 years of cyclist crash data, uncovering high-risk intersections and patterns that directly informed BC's provincial safety strategy
- Designed and validated traffic flow simulations with custom geospatial networks, enabling scenario testing and predictive modelling of traffic outcomes

Engineering Researcher, *National Research Council Canada*

01/2022 – 04/2022

- Processed and visualized telescope datasets to evaluate system sensitivity, providing statistical insights that supported published research
- Applied trade-off analysis to optimize optical designs, reducing cost by 20% while maintaining performance
- Designed hardware integration improvements that increased cross-system compatibility, ensuring reproducibility and scalability

PROJECTS & INVOLVEMENT

SeedBot, *Autonomous seed scanning system with InSporos* 

04/2024

- Developed a semi-autonomous seed-scanning prototype, integrating gantry motion control, computer vision, and vacuum suction to accelerate the seed scanning process
- Delivered hardware/software integration that improved throughput and inspection accuracy

Solar Chapter Canada, *Project Coordinator* 

01/2024 – 09/2024

- Coordinated the design of a solar-powered pump system providing water access for 1000+ residents
- Managed stakeholder alignment, technical specifications, and system implementation in resource-constrained conditions

TraffiBot, *ROS-based ML Autonomous Traffic Control Robot* 

04/2023

- Designed and trained a CNN model for license plate recognition, achieving high accuracy via data augmentation and optimization
- Developed an autonomous traffic control robot using ROS and computer vision for real-time traffic control

UBC Supermileage Fuel Cell Car, *Electrical Team*

09/2022 – 06/2023

- Designed and integrated a vehicle control board with safety and optimization features for the fuel cell prototype
- Executed PCB soldering and rapid debugging under competition conditions

SKILLS

SQL, Python (pandas, numpy, sklearn, TensorFlow), Statistical Analysis, A/B Testing, Data Visualization (Power BI, matplotlib, seaborn), C/C++, Java, JavaScript, HTML/CSS, Django, React, MATLAB, Swift, Computer Vision, Machine Learning, OpenCV, ArcGIS, Git, Figma, User research
